OVERHEAD DOOR WINS 2016 PRODUCT INNOVATION AWARD
The Allura Shutter Outshines the Competition in
Architectural Products Magazine's Sixth Annual Product Innovation Awards

LEWISVILLE, Texas (Nov. 17, 2016) — The Model 653 Allura Shutter, a versatile and attractive option for rolling security shutters designed and manufactured by Overhead Door, has been awarded Architectural Products Magazine's 2016 Product Innovation Award.

 "Rolling security shutters provide security for businesses often at the sacrifice of aesthetics," said Jennifer Malcuit, Rolling Steel Product Manager, Overhead Door. "The Allura Shutter provides both security and stylish design which expands the use and application of this product."

Model 653 is available in four powder coat and six beautiful wood grain finishes to complement any palette. The Allura Shutter is perfect for areas with high pedestrian traffic such as retail stores, pharmacies and hospitals, which often require security as well as flexibility in design to match the surrounding environment. The compact design coupled with upscale aesthetics and configured for light and air passage equates to a finished, professional look.

"Building on the success of last year's program, our sixth edition of the awards proves commercial building manufacturers are committed to, and are working arduously toward, delivering more sustainable products, as well as products that deliver better performance, life and affordability," said Jim Crockett, editorial director for Architectural Products Magazine.

Now in their sixth year, The Architectural Products Product Innovation Awards determine and honor innovation in the development and refinement of buildings-related products that range from cladding systems to interior finishes. Judged by a group of 28 independent industry professionals, the program represents a mechanism to impartially review product and present to the magazine's readers items their peers found innovative and worth investigating.
